JOHNNY WONDER
Q. WHY DO STARS TWINKLE?
 MARTHA MENDENHALL, OF CINCINNATI, OH., WINS A PRIZE FOR THIS QUESTION.
 On a clear night the sky is full of stars. They often seem to twinkle and flicker. The stars themselves don't twinkle. They only seem to because we see them through the layers of moving air that cover the earth. The shimmering air bends the starlight so that it seems to change in brightness, and the stars appear to twinkle. People got the idea that stars have points because they twinkle. But stars are really huge spheres, like our sun. If we could see them from the moon, where there is no atmosphere, we could see stars shining with a steady and clear light.
 You can win a World Almanac if your question is selected. Send your name and age to JOHNNY WONDER c/o this newspaper, P.O. Box 12346 Santa Cruz, CA 95061
